

# **Zebra Mussel Found**

***Bay Lakers,***

*In late June a single, live, mature Zebra Mussel (ZM) was found attached to a rock on Brighton Point Shoreline just east of Second Narrows. The DNR is still analyzing the specimen. No other ZM's have been sighted in the area.*

*In order to help us understand if we have a true infestation, we need your help in inspecting your dock posts, boat lifts, and boats. ZM's attach to hard surfaces and in their early stages feel rough like sandpaper. Please take a few moments to put on those goggles and take a look and also feel of your equipment.*

*Report anything suspicious to [swimfishphil@icloud.com](mailto:swimfishphil@icloud.com).*

*No need to report if nothing found.*

*Thanks in advance for your assistance.*
